Market Commentary

The first four months of 2021 have been a continuation of the rebound in investment markets that was triggered by unprecedented government support that began in late March 2020 in the very early stages of the coronavirus crisis, lockdowns and economic recession. The main event affecting investments this year have been new US President Biden's \$1.9 trillion coronavirus support bill, plus a further \$2.3 trillion on infrastructure, clean energy, manufacturing and education. In Australia, support programs are being scaled back, with limited side-effects, and stronger than expected jobs markets and consumer spending. On the monetary side, central banks in the US, Australia and other key markets have renewed the determination to keep interest rates low for years.

Share prices continued to rise in April as companies posted good rebounds in revenues and profits in the latest reporting season. The US was again the best of the big markets led by its tech, online retailing & social media giants. The best sectors globally in 2021 have been those worst hit in 2020 - banks (with lower bad debts than expected) and oil/gas (with oil prices recovering), although both sectors are still well behind the rest of the market.

Our diversified investment portfolios posted modest positive returns again in April thanks to gains in each of the major asset classes. We are aware that investment markets are priced at very expensive levels, but we remain cautiously optimistic that the enormous fiscal and monetary stimulus can sustain the surge in incomes, spending and company profits for the time being.

Portfolio Overview

The Soteria Growth Portfolios invest in a diversified mix of asset classes using a range of carefully selected, best in class, managed funds and exchange traded funds. The weights of assets and asset classes are reviewed and adjusted regularly within specific ranges based on relative valuation, return outlooks and likely risks. The Soteria Growth Portfolios are managed with a focus on downside protection and an aim to generate total returns well above inflation for investors who can tolerate volatility of capital values and income levels along the way.
