Multisector Moderate Peers	-0.89%	0.32%	0.92%	4.38%	4.28%	3.41%	4.35%	3.59%

First Quarter 2025 Market Commentary

Trump's reciprocal tariff plan announced on April 2nd "Liberation Day" was to some extent well telegraphed, but like everyone, we were caught off guard by the size, breadth and timing of the tariffs. Most market participants were expecting a headline increase in the average tariff rate of around 10%. Instead, the new baseline and reciprocal tariffs, as well as sector tariffs on steel, aluminum, automobiles and on Canada, Mexico and China will lift the average US tariff rate to around 23%. This is unless the tariffs are reduced over the next 90 days, given Trump's recently announced pause to allow trade negotiations with most countries excluding China. Financial markets reacted violently to the potential shock to global trade with the US equity market down around 10% in the two days following 'Liberation Day'. This was followed by a 10% rise when tariffs were paused. Moves of this size and speed have only been seen three times in 85 years: the 1987 stock market crash, the Global Financial Crisis in 2008 and the 2020 COVID sell-off. Currency, bond, and commodity markets have also seen outsized moves as investors factor in slower global growth, faster interest rate cuts and reconsider the risks of investing in the US.

Looking forward, economic, trade and political uncertainty are likely to remain very high and the range of outcomes is unusually wide. Further economic and equity market downside remains a large possibility depending on whether tariffs get negotiated down over the next few months, remain in place long term or retaliation leads to further trade war escalation.
